WATER FEATURES

2021 PRODUCT CATALOGUE

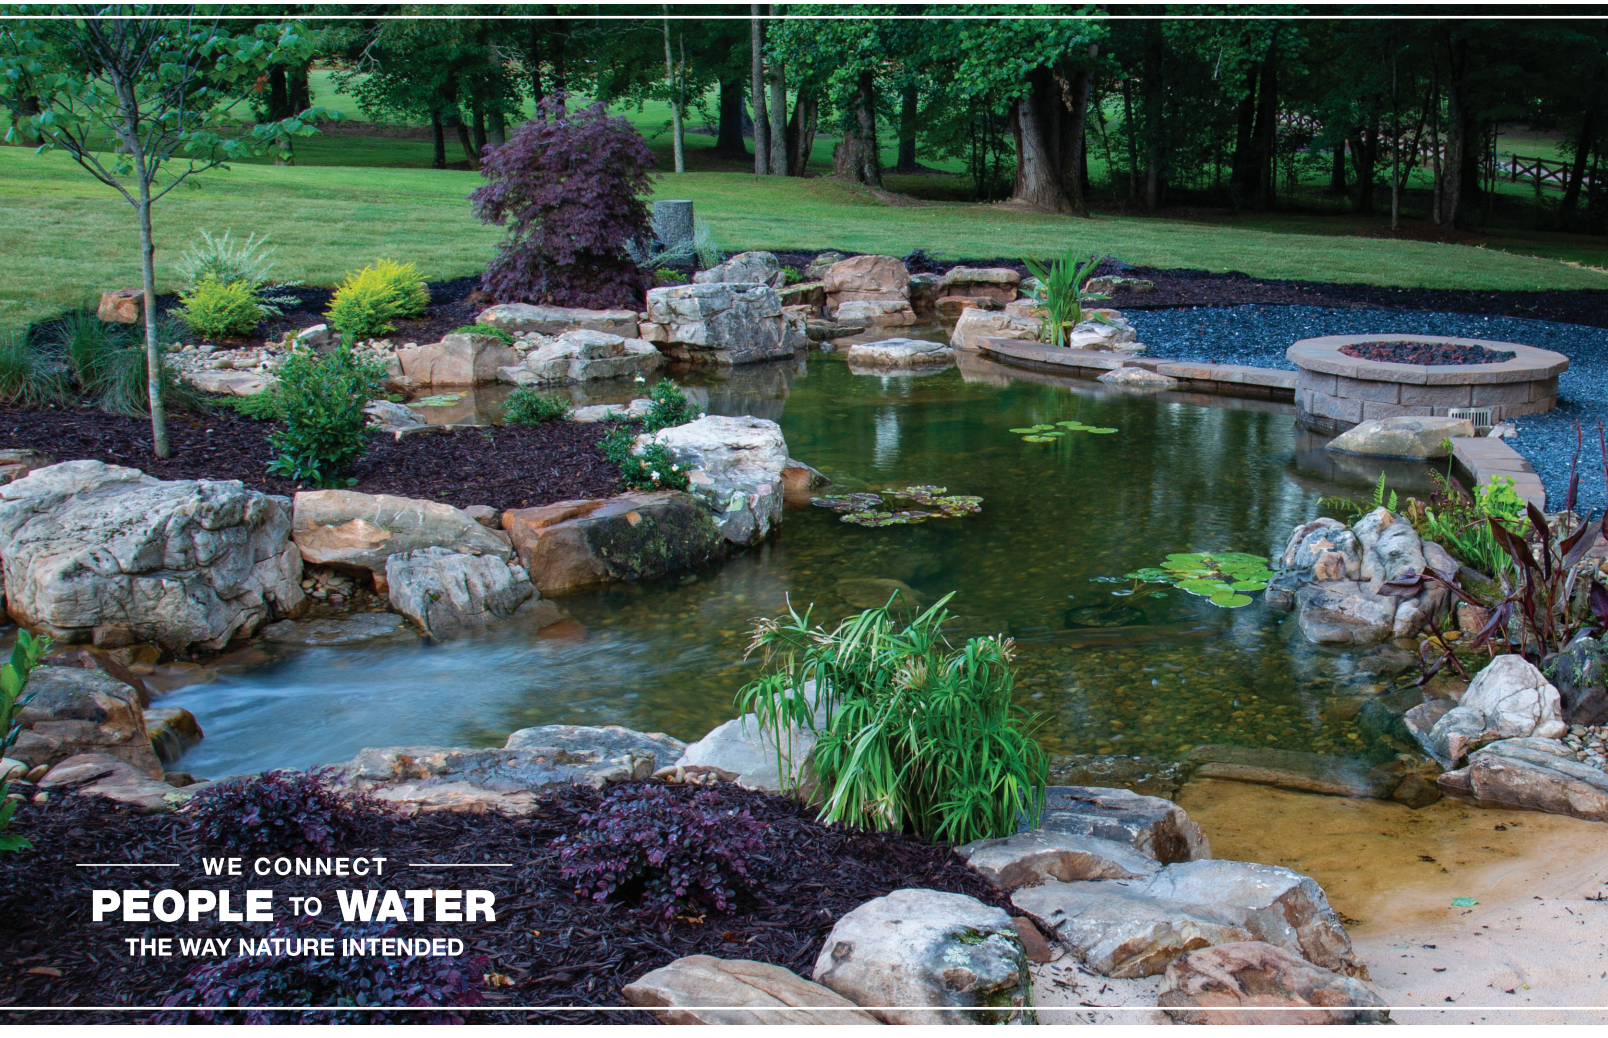

If there's one thing you'll see flowing throughout this water feature product catalog,

IT'S PASSION!!!

There are so many new water feature ideas and innovations throughout every section of this catalog that when you flip through its pages you'll be fully inspired to start Living the Aquascape Lifestyle™!

I'd have it no other way as we enter our 30th year in business.

When I started Aquascape out of my love for nature, and in particular turtles, there wasn't a single manufacturer of professional water feature products on the planet! Today, Aquascape is the largest manufacturer of decorative water features in the world and still the only manufacturer that designs, installs, and maintains water features.

Over the years, we've created all the things we'd like to see developed, tested, and introduced to us as hobbyists to improve our experience with water features including:

- An Automatic Dosing System to administer bacteria and water treatments
- The innovative IonGen™ to eliminate string algae
- A full line of pumps, which run the gamut of exceptional features and benefits for any application
- Fish food that is second to none when it comes to promoting growth and color-enhancing capabilities for your finned friends
- And, keeping with today's technology, you can finally control everything from pumps to color-changing lights with our Aquascape smart control products.

At every turn of the page, Aquascape continues to provide the best products and services in the water feature industry.

With everything going on in the world today and more people spending time at home with their loved ones, we continue to be passionate about creating additional ways for people to enjoy Living the Aquascape Lifestyle!

PONDLESS® WATERFALL KITS

A Pondless® Waterfall is simply a re-circulating waterfall or stream without the presence of a pond. Aquascape Pondless Waterfalls work by pumping water contained in a large, in-ground reservoir up through the Waterfall Spillway, allowing the water to flow back down into the reservoir. This simple recirculation system requires very little maintenance, is easy to install, and ideal for families with young children or pets that love to play in water.

Selected waterfall kit components work well together to complement and enhance your existing landscape. In just one day you can enjoy the soothing sights and sounds that a waterfall adds to your yard.

THE PONDLESS® WATERFALL KIT

1. **Pondless® Waterfall Vault**–Houses and protects pump
2. **AquaBlox® Water Storage Modules**–Provides water storage
3. **Pond Pump**–Pumps water from the underground reservoir to the spillway to create a waterfall
4. **Pipe**–Directs water from the basin/reservoir to the Waterfall Spillway
5. **Rocks and Gravel (not included)**–Naturalizes the waterfall, protects the liner, and filters the water
6. **Liner and Underlayment**–Creates the form of the waterfall stream and holds water in the water storage area
7. **Waterfall Spillway**–Provides a smooth, flowing waterfall

Two forms of filtration are critical to maintaining a healthy ecosystem pond: mechanical and biological. Ecosystem ponds process fish waste, uneaten fish food, leaves, debris and runoff from lawns through mechanical and biological filtration.

In ecosystem ponds, mechanical filtration is provided by a pond skimmer and biological filtration is provided by a BioFalls® Filter.

To keep your pond or water feature looking beautiful, it is important to provide proper filtration. Features and benefits of Aquascape filters are noted in the following pages, making it simple and easy to select the correct filter for your application.

POND SKIMMER FILTERS

Pond skimmers are designed to eliminate water quality problems and reduce maintenance by removing debris before it sinks to the bottom of the pond, allowing a pond to be installed anywhere, even beneath trees. Because the skimmer removes debris before it reaches the pump, it acts as a pre-filter, reducing pump maintenance and making pump access quick and easy. All pond skimmers include a limited lifetime warranty.

AQUABLOX® WATER STORAGE MODULES

AquaBlox® Water Storage Modules provide an efficient way to maximize water storage capacity in Pondless® Waterfall reservoirs, rainwater harvesting systems, and permeable paver applications. They allow over 3 times more water storage capacity than gravel and hold approximately 7.4 gallons of water per cubic foot, compared to gravel, which holds approximately 2.2 gallons of water per cubic foot. Extra water storage capacity means less time topping off the reservoir due to evaporation. It is also easier to clean and less prone to clogging than traditional gravel basins. Construction with AquaBlox requires a smaller footprint than reservoirs constructed with gravel resulting in fewer labor hours to excavate and move gravel, as well as less liner and geotextile underlayment.

SNORKEL® AND CENTIPEDE® WETLAND FILTER

Our patented Snorkel® Vault and Centipede® Module were specifically designed to tackle the common issues that plague large scale water features. They are modular in design, allowing builders and designers the flexibility to expand the system to meet their needs. It is highly effective at removing sediment (suspended solids) from ponds, improves water clarity, and reduces the need for costly and invasive dredging. The filter system works on earth bottom and liner membrane ponds and is easily retrofitted onto existing ponds. It also reduces the physical and chemical maintenance that goes along with removing algae.

Aquatic plants are an important part of the water garden. They provide beauty and naturalization with a huge array of plant choices. Most importantly, they help balance the pond's ecosystem and provide valuable biological filtration that removes nitrogen, ammonia, nitrates, and other minerals from pond water. These excess nutrients are often the cause of unsightly water conditions. The end result helps to minimize pond maintenance, leaving more time to enjoy your pond. Without aquatic plants, your pond would not be able to function as a complete ecosystem.

AQUATIC PLANTERS

Aquascape Aquatic Planters are ideal for all pond plants. Made from fine, porous material, the planters allow water in while preventing soil from entering your pond. The flexibility of Aquatic Planters makes it simple to place plants between rocks and other form-fitting areas. Aquatic Planters blend into their surroundings and will not break or crack like traditional plastic planters.

LINER, UNDERLAYMENT, AND GEOTEXTILE

Underlayment is installed before the liner to prevent punctures from rough or rocky ground. Not only does underlayment provide protection for the liner, it also allows the ground to breathe from underneath. The fabric allows the earth's gases to escape from underneath the liner rather than becoming trapped, causing gas bubbles to push the liner up into the pond.

The water spills over the top of the decorative piece and flows back down into the sub-surface reservoir where it is re-circulated by the pump.

Use this kit to create a beautiful waterfall or stream. The water returns to the reservoir that's covered with decorative stone and is continually re-circulated up and over the waterfall.

Rainwater Harvesting Downspout Filter

#30166 MSRP **$308.99**

The Downspout Filter is installed at the base of the downspout ready to capture rainwater and remove a variety of debris that may be flushed into the system during a rain event. Incoming rainwater is passed through a series of mechanical filters that remove leaves, twigs, seeds, and small sediment that accumulate on the surface of the roof between rain events.

- Utilize our online Rainwater Harvesting Calculator to determine how many Downspout Filters your project will require.
- Add a Downspout Filter onto a water feature and use rainwater to top off the water level.
- Handles up to a 1,500 sq. ft. roof and more than 50 gallons per minute flow rate.
- Add a Downspout Filter to any water feature and make it sustainable!
